

12 Jewlie 06. Dear Phil: Many thanks for your letter of Jewlie 10th & the weird enclosures! "Train Wreck of the Week was good, as usual, with its connection between crime & banking. The anarchist nobleman, Bakunin, said that "small crooks rob banks. Big crooks establish them." When I asked my college economics prof. what the difference was between banking & counterfeiting, he smiled & said: "Bankers do not print money & counterfeiters do not charge interest." Obviously, banking is a better racket than counterfeiting!

Ah, Technocracy! I'm reminded of my youth. I think I was around 14 when I met my first Technocrats, who lent me their books. The message was based on one theory (false!) for The Great Depression: over-production. The real reason for The Depression of the 1930s was the bankster-created money shortage, which had nothing to do with production of goods & services. That's why the Communists said: "Capitalism can produce, but it cannot distribute." That was another 'red' herring to gull the Goyim. Technocracy borrowed its Labor Theory of Value from socialists, both of whom are wrong, of course. Value does not depend on the amount of energy required to perform a task, but supply & demand determine value. A diamond found on the beach, as occurred in Australia, is just as valuable as a diamond brought up at great expense from the bowels of the earth. The amount of energy expended in obtaining a diamond has nothing to do with its quality, nor its market value. Thoreau wrote of an Indian who wanted Whitemen's money, so he wove a big basket, but nobody would buy it for money. Yes, he put in the labor & the energy, but no one wanted the basket, so it was worthless on the market. A woodcutter expends much more energy at his production than does a brain surgeon or a violinist, or even a cabinet-maker. Under Technocracy, he should receive more pay because he, the woodcutter, put the most energy into his product, than did the others! But, again, we see supply & demand which determines the value of the product & the labor. Technocracy advocated the distribution of "Energy Certificates," based on a head-count of the population. Each citizen was deemed to be "worth" so much in terms of projected productivity. The Energy Certificates allowed the purchase of goods & services in Technocratic Society. As I recall, nobody owned anything, but he was entitled to use &/or consume what he bought with his Energy Certificates. Technocracy was dualistic, proclaiming abundance & scarcity simultaneously: Machines & technology made production abundant, as productivity made natural resources scarce & polluted our environment.

With such abundant productivity made possible by mechanization & automation, there was to be no scarcity of goods & services, but fewer & fewer people would be needed to produce more & more goods & services. That is why purchasing power was to be determined by head-count, rather than work done. Technocracy's labor force was drafted: all citizens had to perform so many years of work before they could retire, & hand over their jobs to their replacements. No provision was made, that I know of, for disabled persons who could not do any sort of work, nor was it stated that such persons would receive their share of Energy Certificates. To my knowledge, Technocracy was not Marxist, so they did not advocate the Marxist creed of "From each, according to his ability, to each, according to his need."

Obviously, but not to Technocrats, people are not equally productive, nor is it possible to increase the number of people infinitely, if we believe that productivity depletes & pollutes our environment. In Canada, there was a movement similar to Technocracy in the 1930s. It was called The Social Credit Party, which may still exist. It came to power in Alberta, in 1936, the depth of The Depression. The Social Credit provincial government began to issue "Prosperity Certificates" which were legal tender, usable as money. This quickly brought retaliation from the banksters' Bank of Canada, which threatened Alberta with military invasion if the "Prosperity Certificates" were not withdrawn immediately, so the Banksters' Depression could resume. The Social Creditors caved in to jew pressure, & their party became a hollow shell. In the USA, the head of Technocracy was invited to explain his party's program. As I understand from some who heard his incoherent speech, the head Technocrat failed to explain his program for ending The Depression & for running a Technocratic society. Was he stupid, or was he paid to be stupid? is my question.

Social Credit has been tempting to Catholics, who imagine that they can f..k their way to prosperity, but only in a cannibalistic, slave-trading society, in which people are of value as goods & services, themselves. I pointed out that productivity gives value to money, not consumers. I suggested my Social Creditor do an experiment: suppose every Chinaman were to receive \$10,000 in Chinese money, just for existing. Would that bring about prosperity? No, it would bring about inflation, for the supply of money would suddenly exceed the supply of goods & services. Of course, the Mexicans would love such a system, but they would

2) soon discover inflation, along with Mexican-style depletion & pollution of resources. I note that your Technocrats call themselves "North Americans." This is a geographical location. As yet, there is no North American government, nor a North American political-economy, nor North American citizens. Presently, North America, which runs all the way to the Colombian border with Panama, including Central America, is divided into separate jurisdictions, with separate citizenships, such as Canadian, U.S.A., Mexican, &c. We know that the ZOG wants such an entity, but the massive illegal immigration into North America may cause disintegration before such an unwieldy amalgamation can come about.

Assuming that the Judeo-Freemasonic scheme of continental amalgamation is realized under a new Continental Congress, we should also assume that it would be under ZOG's jew-banksters, as usual. This regime would preclude the Technocratic economic system by which purchasing power is distributed by head-count, rather than work performed.

Human inequality, as well as racial & cultural differences are ignored by the Technocrats, which invalidates their program from the outset. Who are they to tell people what is "enough," for example? When the Zionist powers that be want more for themselves & less for the Goyim, will the Technocrats object? If they do object, how would they make the malefactors of great wealth behave? Nobody has done so in recorded history, least of all the Technocrats in a century of their existence! In their publication I see no new additions, only omissions, but thanks for a trip down Memory Lane!

In regard to the bible-banger-blather, prophecy is paralysis, for it discourages improved behavior. It is said that the Devil can quote scripture, so whenever I see scripture quoted, I know it's the work of the Devil. Savitri Devi warned that other-worldly religions are bad because they discourage good people from striving to improve this world. As one writer said: "For Evil to triumph, it is only necessary that good men do nothing."

In his "Civil War Two," Thomas Chittum describes a race in which the ZOG promotes globalism against U.S. Patriotism, while the continent rapidly fills with hostile aliens who claim their turf. The race is between the forces of globalism versus the racial rivalries which will balkanize the U.S.A. & cause it to disintegrate. Unless there is a Change of Mind with Whites, we shall remain as spectators & as victims of these processes. Kennewick Man shows us that something similar has happened before on this continent, wherein Whites have been adulterated & then killed by Asians.

The artificiality you condemn, our separateness from Nature, are decreed by Judaism in all its anti-Nature forms, for Judaism claims that man is not part of Nature, so natural laws do not apply to man, who may deplete & pollute his environment as he chooses, on behalf of man's multiplication, as commanded in the jew-book. The genocidal jew, Morgenthau, figured that the destruction of German industry would cause the deaths of two thirds of the German population quickly, & that the remainder could be sterilized. Ted Kaczinski (sp?) wanted to de-industrialize North America, with no limit to population. Without industry, such as factories, food processing & storage facilities, electricity, transport, farms, dairies, distribution centers such as food stores, water systems, sewage systems & treatment plants, public health & sanitation measures, the present population could not be maintained, let alone multiplied. In a Kaczinski state of Nature, the majority would starve from lack of food & die from drinking contaminated water. With 'natural' living conditions, a population would suffer the fate of armies in the U.S. Civil War, in which 9 died of disease for every soldier killed in battle. When troops camped out in one place for too long, their drinking water would become contaminated from human waste & disease would set in. Only a few may live off the land, as did the American Indians before the second arrival of the Europeans. As I understand, there are many more "Indians" now than there were before Columbus, so for people to live 'naturally,' immense numbers would first have to die. Man is 'unnatural' to a degree, for he must use his brain to survive. His teeth are too small to impress a tiger; he has no strength compared to a gorilla; his fur is too thin to withstand a winter; he is too slow to catch deer & antelope, & he is too puny even to slow down a buffalo. To exist, man invents, but he must limit the scope of his inventions & above all, limit his numbers if he wants to live on this planet much longer. Man's duty to himself is to improve himself & to limit his numbers. If not, Nature will do so, for Nature is Nazi, & man is just another life-form among many. Man can never 'defeat' or 'conquer' Nature. All he can do is to find his place within the Natural Order, & behave himself accordingly. How simple, but how very difficult it is! All the best. DOWZ! & ORION!

Esie
