

sentence of a minimum of 10 years in prison, according to **Anna Pape**, apologist for the **Canada Border Services Agency**. Unwisely, the girl persisted in her relationship with the thug, as on the afternoon, evening and night she died. Around 3:30 a.m., roommates in her Chinatown boarding house heard screams from her room and attempted to break down the door as Hindessa exited by the window, jumping 25 feet to the ground. He was picked up 45 minutes later on the Bloor Viaduct, threatening to jump. Ms. Novak was pronounced dead at the scene -- he'd cut her throat. According to Homicide Squad Detective Sergeant **Gary Giroux**, Novak's was "a very loving and caring family." Her parents had helped her move into her new home two weeks earlier. Giroux said Natalie's parents "were disappointed to find out he was still in contact with their daughter." They had met the accused, who made an asylum application after December 31, 2005, will be eligible." (**UK Sun**, January 13, 2006)

HEALTH WATCH

How Now, Mad Cow?

In the 20 years since Britain realized it had a disaster on its hands, the world has agreed that forcing cannibalism on ruminants is not really "cost effective" at all. Mad cow disease is one bullet Canada should have dodged but, thanks to Ottawa's usual quick thinking, didn't. While we cannot predict where it will end, one nagging question remains: How were **prions**, the causative agent of the **spongiform encephalopathies** like mad cow disease, introduced to British cattle in the first place? Some theorize that a single animal suffering from a spontaneous case of **BSE** (and it does happen) ground up into animal feed *could* have infected the entire British herd, but Professor **Alan Colchester** of the **University of Kent** doesn't think so: "The **UK** imported hundreds of thousands of tonnes of whole bones, crushed bones and carcass parts in the 1960s and 1970s to make fertiliser as well as meat and bone meal feed. Nearly 50% came from Bangladesh, India and Pakistan, where gathering large bones and carcasses from the countryside and from rivers is an established local trade. Hindu funerary practices require that human remains are disposed of in a river, preferably the Ganges. Although the body should ideally be burned, many people cannot afford enough wood for a full cremation. ... Human remains have been described in material delivered to processing mills. And during the 1960s, human material was confirmed in consignments of bones shipped into French docks from Asia." (**BBC**, September 1, 2005) Some bone fragments survive even the most efficient crematoria; in bonfire cremations, large bones like the pelvis are not consumed. More to the point, as travel writer **Mark Moxon (Varanasi)** notes: "Not everyone is burned at the *ghats* [crematory sites on the steps along the Ganges], oh no. Holy cows, children less than twelve years old, and pregnant women are not burned because they are pure (in the latter case it's the baby who is pure) and the whole point of the fire is to cleanse the soul on its way to heaven; lepers and people suffering from other diseases ('People with poisons in their body' was how one chap referred to it) are also *not* burned, and along with the cows, children and pregnant women they're tied to a rock, rowed out into the middle of the river and dumped overboard. That sounds just fine, but Indian ropes being Indian ropes, these bodies soon find their way to the surface... Taking a boat on the river, a delightful experience especially at sunrise, is a wonderful and cheap way to enjoy the *ghat* area, but if you're squeamish, then the floating bodies with their gaping skulls picked almost clean by the birds, and the faintly familiar rib cages stacked on the east bank, may put you off your breakfast." However unsavoury, the relationship to prion infection is not immediately clear -- until you add the prion's helper, cannibalism, to the mix: The first transmissible prion disease to be identified was **kuru**, a **CJD** variant unique to New Guinean tribesmen practising cannibalistic funerary rites. The fatal

affliction was conclusively linked to anthropophagy. Now, consider that "a new Indian documentary seeks to shed light on a secretive sect of Hindu ascetics who allegedly eat human corpses, believing it will make them ageless and give them supernatural powers. The 10-minute movie **Feeding on the Dead** delves into the little-known world of the 1,000-year-old **Aghori** sect, whose *sadhus*, or holy men, purportedly pull bodies from Hinduism's holy river, the Ganges, in northern India. The sect has been written about, but rarely filmed performing its rituals. ... Their consumption of human flesh -- a practice whose origins remain a mystery ... has earned them the condemnation of other Hindus and relegated most of them to living around crematoriums in the hills around the northern holy city of Varanasi [or Benares, as we know it]." (**Associated Press**, October 27, 2005) Why cannibalism? Well, according to **Prerna Salla (Buzzle.com)**, March 16, 2004), "Aghoris strongly believe that there are no opposites in this world and that the conventional Hindu distinctions between purity and impurity are actually an illusion ... The purpose of embracing pollution in these practices is realization of non-duality through transcending social taboos and seeing the illusory nature of all conventional categories. ... Moreover, they believe that this act [corpse eating] gives one an absolute feeling of catharsis, destroying every shred of hatred and bringing with it immense divine foresight." Sounds like diversity training. As for Professor Colchester's theory, **Sanjay Mistry**, spokesman for the **Hindu Forum of Britain** denounces the hypothesis in predictable terms: "Their implication that cremations in India are not done properly isn't correct. This may cause upset among the Hindu community. They could feel that they have become scapegoats for **BSE**." In an inadvertently humorous outburst, Mistry dismisses Professor Colchester's theory as "half-baked." Over the course of the **UK** epidemic, an estimated 2-million cattle were infected and more than 4-million destroyed. Worse would come ten years later when the first human cases of variant **Creutzfeldt-Jakob** disease (**CJD**) were detected, from which more than 150 have died. As infectious agents, prions are the stuff of nightmare, or science fiction: "Prions are proteins, rogue proteins, and nothing else. They contain no nucleic acid (**DNA** or **RNA**). They consist of a single molecule containing about 250 amino acids, termed the **PrP** protein. They are abnormal variants of proteins that occur normally in cells, such as human brain cells. Amazingly, abnormal **PrP** proteins, when they enter the body, are able to convert their normal counterparts into more of the abnormal forms. The difference between the normal and abnormal proteins does not lie in their primary structure (the sequence of their amino acids), but rather in their folding -- the abnormal **PrP** proteins are folded in a way that allows them to resist normal protease degradation so that over time this leads to the build up of aggregates of **PrP**, especially in neurons in the brain. ... Prions are the only 'life forms' that break the great 'central dogma' of biology. That is, we have come to expect that all life forms from viruses to bacteria to plants to humans to hand down the blueprints for all their progeny via their **DNA** (except for some viruses which carry their blueprints as an **RNA** genome), and we expect that the process for converting the blueprints into building blocks must involve replication of **DNA**, transcription of the message into **RNA**, and translation of the **RNA** s message to form proteins, the building blocks of cells, tissues, organs and whole organisms. Here we have life forms where abnormal proteins, the **PrP** proteins, direct the refolding of normal proteins *just by direct contact*." (**Dr. Frederick A. Murphy**, Dean of the School of Veterinary Medicine, University of California Davis) Because prions are not alive in the conventional sense, they are resistant to most known forms of disease control, such as antibiotics, sterilization, chemicals and/or heat. As a result, the various types of **spongiform encephalopathy** cannot be cured, and animal victims cannot be safely used for food in any form.

23 Jewlie 06. Hail David! Many thanks for yours of Jewlie 19th, & the news that the typewriter is on the way. I hope ZOG does not think it's an implement of terrorism. Good thing it isn't watercooled! It is beltfed, of course, but not gas-operated.

It is indeed clear that Israel sees defenceless Lebanon as business competition. The Lebanese lament that they just managed to rebuild what they lost after Sharon's 1982 invasion & the subsequent civil war, & now it's back to rubble. Lebanon is punished for Hezbollah, as we know, so the jews' destruction of the entire Lebanese economy & many civilians may be a bonus for Israel, protected as it is from jewsmedia criticism. Israel's behavior may indicate that Israel does not understand the new form of international warfare. After trashing the sovereignty of territorial states, Israel's jews appear to think in terms of countries as political entities, which is no longer the case, thanks be to ZOG. Israel & its jewish puppets continue to weaken territorial states' governments, as in the USA, as well as in Iraq & Lebanon. All states are subordinate to international banksters, and the equal & opposite reaction to the Jew World Ordure is international Islam, which has its own banking system & methods of international money transfers, as do the international Chinese. This is the world that CFR wanted, & it is a world which they may not like.

As you say, ZOG keeps the North American borders open to all, including Moslems, who may serve as an excuse for our continued trashing of Moslem countries, because of domestic Moslem terrorism. So why let them in, otherwise? Was World War II the time to admit Japanese immigrants? No, so is the current war on (Moslem) terrorism the time to be admitting thousands upon thousands of Moslems? DUH! What may we expect of people who have strong family loyalties, an equally strong sense of honor & a strong devotion to their militant religion which dictates conversion &/or conquest of infidels? DUH! Is ZOG that stupid? It goes without saying that the American sheeple certainly are.

Terrorism on behalf of tyranny is an ancient formula for driving sheeple into a dictator's sheepfold, but what happens if the shepherd admits the wolves into the fold, as well as the sheep? How does one run a tyranny with terrorists on the loose, & with affirmative-action mud-minions who care only for their pay, rather than their performance? It seems like a mad dictator who were to staff his high-tech surveillance system with monkeys. If the enforcers are mercenaries, for whom might they be enforcing? Of course, the ZOG is international, since it is jewish, but its global mischief would seem to deny the zoglings any safe haven on Planet Earth, certainly not Israel. China, perhaps? Stay tuned!

Armed struggle has been called "the propaganda of the deed," so who is winning the war of propaganda, Judeo-America & Israel? In my view, neither one, but Hezbollah appears to win more supporters with every dead infant in Lebanon or in Zionist Occupied Palestine. It is notable that the Hezbollah missiles on Haifa stopped Israel's systematic massacre of the Arabs of Gaza. Maybe the Zionists are not learning these lessons, but anti-Zionists seem to be. A global threat to freedom can be fought globally & strategically. Obviously, minds are objectives in warfare. Zionist arrogance & evil win for the other side, even if the body-count favors the Zionists, at present. The opposition has lots more bodies where they came from, & they are not known to 'cut & run.' At present, I would not say that time is on the side of Zionism's Jew World Ordure.

In addition to false flag ops, our ZOG is touting its detection & apprehension of talk-terrorists who babble about bombs, but do not have them. The bomb-babble is often instigated by ZOG agent provocateurs, as well as mental defectives, like the truck driver who blabbed about blowing up The Brooklyn Bridge. I don't know what came of that "terror" case. ZOG can score cheap propaganda victories from those who talk terrorism, but I doubt that such methods will stop real terrorists, who likely do their plotting off the Internet. All ZOG has to do, if it wants real terrorists, is to leave the borders open, ostensibly to "cheap labor." Ha!

As Janis Joplin crooned: "Freedom's just another word for nothing left to lose." As you observe, more & more Americans appear to have less to lose with every passing day, & they are getting teed off. All they need is a target for their anger. Can ZOG divert it to Iraq? I think the Americans' anger will focus here, partly because of our Iraq Disaster. But what form will it take? Will it be on the Internet or in the streets? Stay tuned!

We don't need TV to provide excitement. Like you, I find these times exciting & exhilarating, like my first year in Colombia. As "guerrilla theater," would one feature "The Battle of Algiers" with "Michael Collins"? On the other hand, it must be scary & depressing to be a liberal. I hope you are enjoying the diverse weather. Ours is like a dry part of Central Africa. E.T.
