

12 SEP 06. Hail Kriss! Many thanks for your letter of mysterious date which arrived on 9-11. I hope you like your new residence. Some claim that "a change is as good as a rest!" I guess this would apply to zoggies as well as ZOG - P.O.W.s, in which everyone sees new faces: much cheaper than paying for a Hawaiian vacation! Or, for a 'vacation' in Bagdad. Bagdad is reportedly the most dangerous city, & Congo Brazzaville is second.

I'll send your request for addresses to Ron McVan, who also has contacts you may find of interest.

Gulags are institutions, like armies & hospitals. They exist as separate worlds within societies. Schools & universities are similar, but their inmates do have access to the 'real (outside) world.' People I've known from former Communist countries also showed similar institutionalization. This condition reveals an inability to cope in many ways with normal situations in 'the outside world.' I have worked with prisoners on firelines who have told me how bewildering it must be to stand at a bus stop, where one could get on any bus, or in a supermarket where one has so many items from which to choose. Personal initiative is discouraged in institutional settings. One does not decide for himself at least 5 issues of human existence: where, what, when, why & how. When my day begins, I decide. I can eat or not eat, as I choose, any time of day or night. I can stay inside or I can go on errands, or just wander around the area. I can live like Thomas Edison, who slept any time he felt sleepy, & then I can work around the clock. No one tells me where to go & what to do, nor how to do it. I know why, as well, that something needs doing on my own terms or not, as I please. I have also lived in institutional environments in which others structured my schedule & determined what I did, as in the workplace. In that case, I had to adapt to others' requirements. Now, I adapt my activities to my requirements. These are the joys of retirement, in which I am more active than I was when I was a workingstiff. I have never known such freedom, ever!

The jew-commie, Erich Fromm, wrote a thought-provoking book entitled "Escape from Freedom." He claimed that most people conceive of freedom in terms of "freedom from," but many fear to tread in a world of "freedom to." U.S. studies on U.S. P.O.W.s of the Korean War revealed that fewer than 1 out of 20 have leadership potential, which includes initiative, the ability to start things on one's own, without being told to. Here is a clear case of Nature versus Nurture: how much of leadership is genetic & how much is environment? The U.S. statistics derived from the Korean War indicate that leadership is firmly based in genetics. The U.S. prisoners were all draftees, with very few exceptions. They all had an "American experience," with the normal anarchistic, selfish, divergent American "values." Yet, barely 1 out of 20 such men had such potential leadership qualities, which their Chinese captors described as: One to whom other men listened; one who had a sense of humor, & one who showed bravery on behalf of principle. The 19 out of 20 were 'sheeple'. One third died, as I recall, because THERE WAS NO ONE TO TELL THEM TO GET OUT OF BED!

Sheeple exist as consumers. When they are not working, they consume: TV entertainment, junk food, drugs, booze; anything which does not require mental & physical activity. For the majority, THINKING is actually painful & tiring, just as walking is for the couch potato & those confined to the automobile, who graduate into wheelchairs & their motorized successors. Non-sheeple find, as I do, that mental & physical exercise is refreshing & invigorating, & I am not a very good consumer, for I strive to limit my consumption, which is usually expensive & harmful. I have no car, since I could not afford one, even when I was working for minimum wage, part-time. I have rarely required a car, & I organize my living circumstances so I do not need one, even if I could afford one, at today's fuel prices! Moreover, I have no secure place to park, if I had a car, to prevent thefts & vandalism, as is normal here in Brownest Yakima. Within a month of my arrival from Louisville, KY, vandals had smashed a tail light, & I was told by a denizen that "they" would destroy my car if I did not remove the For Sale sign from its window. Fortunately, I sold it to a Mexican before it was trashed. I guess the gang-bangers thought it still belonged to a Gringo! Boy, was the Mexican owner irate. I understand that vandals in Mexico do not live very long, for cars are expensive & life is cheap, as we are learning from our mestizo invaders & occupiers. Recently, one fellow, a mestizo, was shot dead because he wore a red university sweatshirt. The killer, another mestizo, thought he was a member of the opposing gang. Embarrassment & regrets were published in The Yakima Harlot-Repulsive, as locals call it, for good reason. Imagine that it seems acceptable for the wearer of a red or blue shirt to be shot on sight! This is truly a multi-cultural society, & diversity includes race & behavior.

2) Our ZOG preaches 'diversity', ignoring the fact that behavioral diversity requires us to have the largest prison population in the world, next to Black-ruled South Africa. The Tower of Babel Fable is one example of diversity in practice. This is what our ZOG wants. I have lived in many diverse societies, one being India, in which all groups co-exist in uneasy truce, which explodes into violence periodically, usually between Moslems & Hindus. India's present is likely to be North America's future, after a major ethno-cultural war for turf, as occurred when India became independent from Britain around 1947, as I recall. The Moslems fled into East & West Pakistan to avoid being killed by the Hindus in the blood-bath which followed independence. China is most likely to be the winner of multi-cultural mayhem in North America, for the Chinese have the numbers, the means & the will to conquer new continents. Moreover, they think in thousand-year terms, whereas we think in terms of weeks & months, perhaps years, as our intelligence declines & the criminal behavior of our Zionist Occupation Government increases. The Chinese military strategist, Sun Tzu, would describe us as "mad bandits" whose future will be dark & brief, & as Hitler described as "a mushroom society," whose sudden growth & sudden demise will result from our values (?) & our behavior. These are some big issues in the 'outside world,' which you may consider.

I remarked to a postal clerk that a letter I was sending to Canada alias China-duh was to a young mechanical engineer who was computer-savvy, on the cutting edge of technology, in terms of job qualifications. He had recently lost his job to his Chinese replacement, whom he'd trained. His company, John Deere, was relocating its operations to China, like so many other manufacturers in North America. Even Mexico is a preliminary departure point for China, unless the Chinese decide to come here, as they are doing, anyway. The 2nd language of Canada is now Mandarin, according to Canada's latest census. Sun Tzu describes a good military commander as winning the battle before the first clash of arms, so that the first battle is merely a military fanfare for his victory, in the war which he has waged successfully already. As I predicted before the war criminal in the District of Corruption sent our ZOG-thugs into Iraq, "we lost just by invading & occupying the country." General William Odom, former chief of NSA, belatedly & partially agreed with my analysis in his essay on why we should get out of Iraq NOW, which appeared on rene.com. One correspondent said that he was grossly overpaid, since I had the same intelligence, sooner & more completely, since I included the Zionist Factor.

In regard to pensions, which were also known as "compulsory savings programs" in the former Soviet Union, I always wondered why workers WERE NOT receiving their full wages in the USA, & why they thought they could trust others to hold their earnings for them. Banks & savings & loans have repeatedly proved that they are not trustworthy, as during The Big Depression of the thirties & the savings & loan scandal of the seventies. Now, large corporations like Enron, airlines, automotive manufacturers & the U.S. government are in the process of reneging on these "trust funds". So-called Social Security, FDR's enforced savings program, may wither & dry up for lack of input, plus inflation. When crooks run the economy, how does one save & invest for his old age? In former times, it was normal for one to work until he dropped or wore out, like an old tool. Social Security was largely created to allow geezers to leave jobs for youngsters in depression times, but things have changed, to say the least! The jobs are leaving for Asia & the new workers are illegal aliens who drive wages down & take remaining jobs. This will not create a crisis IF the native citizens agree to die quietly & cease their reproduction, as they appear to be doing, but as ZOG gets greedier (if that were possible!) the economic-demographic crisis will worsen & accelerate, especially if Bush pushes us into World War III &/or Mexico has another civil war, resulting from its last presidential election. You can be sure that such a civil war would flood the USA with more millions of Mexican invaders, for political as well as economic reasons. In this context of domestic & international events, you may find your entry into 'the outside world' a bit of a shock, as I illustrated in my essay, "Militant Fantasy versus Probable Reality," which I hope your zoggies will share with you, after they read it. All the best & ORION!

*Erin*
