

Sasol to open Indian office in search of CTL projects

Nazi tech to the rescue. *Cape Times*,

JUSTIN BROWN South Africa

Johannesburg – Sasol will open its first project office in India's financial hub, Mumbai, with a staff complement of six to eight people to pursue coal-to-liquids (CTL) projects worth billions of rands.

The entry into India is part of the group's move to build international ventures based on the version of the Fischer-Tropsch synthesis technology that turns coal and gas into fuel at its plant in Secunda.

Sasol spokesperson Johann van Rheede said yesterday: "Sasol has initiated engagement with key stakeholders to evaluate the potential for a CTL project in India. This has resulted in the decision to open a representative office, likely in Mumbai, with an initial complement of six specialists."

Sasol wants to build CTL fuel plants in countries that are net importers of oil as well as having large coal and water resources. The group is investigating countries with coal resources of between 2 billion and 4 billion tons.

India imports about 70 percent of its crude oil. In July last year Indian media reported that Sasol could invest up to \$6 billion (R42.5 billion) in the country

to produce synthetic fuel from coal.

"A large percentage of the world's coal reserves are found in three of the larger, higher-growth economies: India, China and the US. All three countries are engaged in discussions with Sasol at different stages of advancement, with a view to developing CTL plants that will lessen their dependence on oil imports," Sasol chief executive Pat Davies said in November.

The group opened an office in the US when it acquired Condea for €1.3 billion (R12 billion) in 2001.

Last year Sasol opened an office in China to investigate CTL opportunities.

At Secunda in Mpumalanga, Sasol operates the only major CTL plant in the world. It produces 150 000 barrels of fuels a day.

Sasol has held talks with Indian industrial conglomerate Tata, raising speculation that they could collaborate.

In June Sasol signed two agreements with Chinese premier Wen Jiabao to proceed with feasibility studies to investigate the development of two CTL plants producing 80 000 barrels of fuel a day.

Sasol shares rose R1.19 to R231.99 yesterday. The Top40 index fell 0.36 percent.

10 FEB 07. Dear Phil: I just got your letter of 8 FEB 07, with all the goodies. Your curt comments on the news articles greatly enhance their normally mundane meaning, in which they obscure the issues they purport to address. This is another jewsmedia tactic to make Goyim believe that they are being informed, even when the 'news items' miss the point. Thanks for reminding me of this tactic.

The gist of the information from your sources appears to reveal China's conversion of jew-I.O.U.s alias Federal Reserve Notes into usable items. Plastics are made from petroleum, as I understand, as well as tires, so it may be possible to recycle those materials back into petroleum, as well as new plastic products. Clearly, our zogbucks alias dollars are going Weimar. During that kosher inflation, survivors told of buying empty tincans, for such junk would retain value longer than the money used to buy it. WA-ZOG complains, as do other states, that their roads cannot be repaired or improved because asphalt, tar, concrete & rebar have gone up so much in price. Last year, a report on the U.S. construction industry revealed that China imports much of our cement production, so domestic shortages occur. As you say, this country is for sale, & the Chinese have the funds (from us) to buy & bribe their way with "the best government money can buy." The USA was never different, from colonial times to the present. What we are seeing is no surprise, but merely a logical amplification of ongoing folly. I just heard that there are openings for butlers in Asia, & for rickshaw-pullers in Toronto. One commentator in a financial report mentioned that "any job done by computer can be done anywhere on earth." An article from South Africa on India's Mittal reveals Asian plans to invade all countries with trained engineers, thus to spy on foreign industries & to dominate them. What a clever idea! Jews do it via financial control, but in this high-tech era, why not achieve the same via intellectual control? Mittal says that Asia is investing in its human capital, (as the USA & Europe are NOT doing). Case in point: a talented mechanical engineer in Canada is now out of work. This young White man trained his Chinese successor to do his job, & the White traitor management will move the plant to China. In his last letter, he wrote about becoming a landscape gardener. Rickshaw-pulling in the city did not appeal to him.

The robber-barons of the 19th century are back, big time, so "let the buyer beware!" The abuses of the food-adulterers led to the enactment of The Pure Food & Drug Act in the USA, but the bandits run the bank, so such regulations are just "damned bits of paper," to quote George Bush II in regard to The Constitution. That which doesn't sell is now compulsory.

Today, it became official: Obama is running for U.S. president. Why not an Obama-Hillary ticket? Who will be on top, that is, for pres. or veep? Such a ticket would appeal to a good number of race-mixers & other perverts, but what it is likely to do in The Middle East will probably be ignored by the sheeple. Putin complained about the imperialist arrogance of the USA & its allies, & he claims that Russia will pursue an independent foreign policy. We shall see. China just smiles, without comment, 'cause "everything's going their way." We are in a sorry plight when our survival as a race depends entirely on someone else goofing up.

As you noted: why all the palaver about a Mormon presidential candidate, when no one discusses the importance of Israel-first candidates? ZOG knows! I'm actually scandalized over that Detroit News story on the Black killer who will receive free housing & college tuition fees, no doubt based on his 'contribution' to society! I see his tax-funded program also allows him to buy a proper nigger-pimp outfit. Why are White killers not so rewarded? Maybe because they started so late, after they were adults. Young Blacks who kill are deemed special, & deserving of tender-loving care from their tax-payer victims. Such a deal! I suspect this report does not go beyond Detroit, for it may anger some tax-payers, as I'd hope it would. Meanwhile, ZOG claims that explosives used against its forces in Iraq show signs of Iranian manufacture. What about all the AK-47s & RPGs made in Russia & China? Not a word! Soon, we'll hear via the jewsmedia about WMDs 'hidden' in Iran. As you say, the large U.S. prison population will likely serve as Zionist shock-troops in a replay of a jew-bolshevik takeover of the USA. Why else would we have the largest prison population in the world? Re the ongoing attempts to prosecute CIA kidnappers in Germany & Italy: we shall see who is above the law, & the first guess doesn't count. Good article on ZOG's use of Latino-mercs in Iraq. USA is just a modern-day version of the decadent Roman Empire. A South African newspaper reports the transfer of Nazi oil-from-coal technology from South Africa to Asia, rather the extension of that technology. Mucho CO₂! Meanwhile, the jobs pour out & the wogs pour in. All the Best, as always. DOWZ! & ORION!
