Holy cow! Hunt begins for pure-bred American bison

By David Usborne in New York

Published: 11 January 2007

It has been one of America's happiest conservation stories. After teetering on the edge of extinction more than 100 years ago, bison are back, roaming the grasslands of national parks and private ranches of the western US in significant herds. But there's a hitch. How many really are bison?

Not that many, it seems. Animal geneticists have determined that, because of a long history of ranchers cross-breeding cattle with bison in search of a better beef animal, fewer than 3 per cent of the roughly 300,000 bison now in the United States can be considered uncontaminated by the genes of cattle.

It is a discovery that has organisations like the American Prairie Foundation rushing to test as many bison as possible to identify those that can be considered pure and to separate them from the hybrid animals. In a sense the campaign to save the American bison - the real ones - has begun all over again.

Established herds of pure bison fortunately already exist, most notably on national parks, including Yellowstone in Wyoming, and Wind Cave National Park. The large private herd owned by Ted Turner, the one-time broadcasting tycoon and conservationist, on his expansive ranches in New Mexico are also believed to be free of hybrids.

"The US federal herds are the crown jewels of the bison herd," Dr James Derr, an animal geneticist at Texas A&M University and a leader in the effort to isolate pure bison, told The New York Times. "They are healthy, there is no inbreeding, they are pure. That's an amazingly good thing."

Bison with strands of cattle DNA are not easy to spot. They look like ordinary bison with the tell-tale shoulder humps, beard and curling horns. Only by corralling animals, sedating them and taking blood samples can researchers like Dr Derr determine which are hybrids and which are not.

Hybrid bison appealed to ranchers not just because of their good meat yields but also because they were tougher in winter conditions on the open prairies and more resistant to disease and parasites. But scientists worry that in the longer term, the DNA confusion could create problems for the bison species.

"When you mix up two different genomes, you get a lot of different traits, and it's not completely predictable," Dr Derr said. "Hybridisation makes it hard to predict and hard to manage because their immune response can be all over the place."

14 MAY 07. Hail Daniel! Many thanks for your letter of 8 MAY 07 & the great flier, which I've copied for distribution to all my correspondents. I hope you are doing excruciatingly well. If the USSR still existed, I'd recommend you for a Hero of Production Medal! As for me, I'm doing hysterically well, since I've never had it so good under ZOG, in all my previous years.

Wayne lives in Vancouver alias "Hongcouver" in view of its predominately Chinese population. I haven't been to British "California" alias Columbia since 1950. You read that right. I'm not that much of a traveller, unless I have reason to move around, which I've done, twice around the world, usually in search of jobs.

I look forward to your publication of the report on Russia, which I was banned from visiting by the Soviet regime during the Kosher Cold War. I was banned from the USA, USSR & all Soviet Bloc countries, including Cuba, in 1969, according to their embassies. That year I was kicked out of East Germany by Stasi Chief Markus Wolf, who ended up working for his kosher cohorts Chertoff & former KGB head Primakov in "Homeland Security." Obviously, the USSR had lots to hide re jew-domination & war preparations. The Russian railroad system is still of major importance for surface transportation east & west, so one of my railroad 'spies' reported that the Russian railways are all electrified, via overhead wires. I asked him if he'd seen any places where back up locomotives were stored, which must be steam or diesel, in event of a power-outage. He said he'd seen no such things. I surmised: "Then the USSR is not prepared for war with the USA. Further proof came when a crazy German kid flew his plane over Soviet airspace & landed it in Red Square! So much for Soviet air defence: no one awake; no one in charge. How embarrassing! That gave the lie to East & West ZOG propaganda: The Cold War was indeed an Orwellian Hoax to gull the Goyim. USA-USSR co-operation in Turd World countries, most notably in Vietnam, supported my thesis, which the USA confiscated at gunpoint at L.A. International Airport in 1969. So much for warm-fuzzy memories.

I enclose an excellent speech on the German economy, which no other publisher wanted to reprint. Maybe it makes The Third Reich look too good. I have an official speech on the German economy delivered in the USA around 1940, which I can copy for you, although it is more general. Kurreck is more dynamic, as you will see. I have to find the other speech. Lincoln, Tsar Nicholas II, Hitler, & John F. Kennedy based their money on productivity, not debt. That's what jew banksters hate. Both Lincoln & JFK printed United States Notes, issued directly by the U.S. Treasury, which were PAID into circulation, not BORROWED, as are Federal Reserve Notes, which became our sole currency after JFK's assassination. I saw firsthand what happened to U.S. currency before & after his assassination, so I did not have to read any books about it.

You wrote that "only German & French were offered in high school" in Louisiana. When I attended San Fernando High School from 1953 to 1954, Mexicans were a minority, but they had gangs to make up for it. As I recall, no German was offered, just French & Spanish. In those days, it was assumed that all U.S. citizens had to speak English. German was required for college chemistry majors, so I was surprised that it wasn't available in my well-funded high school. Well, I wanted to go to South America, so I took Spanish. I studied German at the U.S. Army Language School at Monterey, CA, which proved very useful in civilian life.

I hope you get some competent & conscientious collaborators on the outside who can assist you with mailings & Internet publishing. My own resources, especially my time, are limited, but I hope my spreading the word of Separate Living's existence will be useful. All we can do is our best, as you have been doing so well!

All the best. ORION!
