

AN ARYAN OVERVIEW OF EVIL

by *Eric Thomson*

Evil is that which harms Aryans. The Aryan definition of evil is free of the semitic fear-and-guilt syndrome so well described by **David McCalden** in *EXILES FROM HISTORY*. The essence of evil is error, which is, for Aryans, due to ignorance, false information and/or stupidity, stemming from downbreeding. When we adhere to error, evil persists. This is what we see all around us: greater evil and fewer Aryans.

In practice, one's definition of evil depends upon who one is, for races and individuals see things differently. When there is no agreement upon what 'is', there can be no agreement on what is 'good' or 'evil'. Non-Whites see their proliferation as 'good' while pro-White Whites see their invasion of our living-space as 'evil'.

Inferior races see evil as resulting in supernatural retribution. Unlike Aryans, they cannot comprehend the value of virtue, in and of itself. A man of courage, for example, is happy because he is free of fear. The man who is cowardly is plagued and beset by fear. It is not necessary to threaten the coward with supernatural punishment for his cowardice in some semitic 'afterlife', nor is it necessary to promise the brave man some celestial re-ward for his 'courage'. The concepts of fear and guilt are truly alien to the Aryan religion, which is the manifestation of truth, rather than the whim of some tyrannical deity. The Aryan, unlike the jew, does not believe the universe to be evil: an evil place ruled by a demonic god. That is why jewish cults like Christianity can be aped, but never understood by Aryan victims. When Aryans behave like apes, I am truly disgusted.

Because the Aryan, above all races, values truth, whether it pleases him or not, the Aryan has the power to defeat evil, by discarding error. That is reward in itself. Unfortunately, many Aryans cling to error until it destroys them. We must heed the ancient warning of the Aryan conquerors of India: "From the corruption of women proceeds the confusion of races; from the confusion of races, the loss of memory; from the loss of memory, the loss of understanding, and from this: all evil."

SOMETHING FISHY ON THE SALMON FRONT

A recent column in the local jewspaper caught my eye in regard to the ongoing dam versus salmon controversy. The writer opined that it was unrestricted use of gill nets by the so-called Indians which caused the rapid depletion of the salmon stocks. The Injuns blame the White man's dams and logging practices for the dearth of salmon in the northwestern rivers. Being a newcomer in the northwestern U.S.A., I asked some locals a few 'dumb' questions: (1) if the dams are so deadly to salmon, which, allegedly, cannot get past them, then why were the salmon not killed off by the dams when they were built, sixty and seventy years ago? (2) If logging is now so deadly to salmon, why were salmon still abundant during the height of the logging industry, sixty and seventy years ago? The locals said they'd never thought of that argument, and several knew of the 'Indians' gill-net practices and their massive depletion of salmon stocks in recent times. Meanwhile, the 'Indians' and their eco-freak allies campaign for the removal of the dams which provide electricity, irrigation, navigation, flood-control and recreation to an infinitely-growing population of mainly non-Whites, to whom we 'owe' our land. Indeed, whom the gods would destroy, they first make mad.

OUR RACE IS OUR NATION!

WHEN I WAS A CHILD, I LEARNED THE THREE CHRISTIAN LANGUAGES:

GOC GOC, DA DA

BAAH, BAAH

ARF, ARF!

BUT WHEN I BECAME A MAN, I PUT AWAY CHILDISH THINGS.

E. Thomson

15 Jewlie 07. Dear Wayne: Your previous letter caused some additional figurative dominoes to fall. I will not say 'microchips', since I am computer-illiterate. In your religious doctrine, I think we'd agree that it must exclude the majority of featherless bipeds, just for their inherent characteristics. One may as well preach to pigs while they engage in their piggish pursuits. I interpret your 'imperatives' to be at least on par with instincts: that is, something no one questions, because it is built into our psyches.

Nietzsche proposed that man is "the bridge" (in evolution) to the superman. Others have considered that 'higher man' will evolve, via his technology, away from his present animal nature. He may even create his own reality in which to live, as depicted in the Walt Disney film, "Tron." Hebrewood has offered such evolutionary conjectures as "The Bionic Man" & "Robocop," in which man is combined with machine to a greater or lesser degree.

Other authors have depicted people who live under Machine-Rule, as in "The Forbin Project," if I recall the name correctly. In that movie, the computer controlling the USA's nuclear missiles 'marries' the USSR's missile-control computer, with the mysterious addition of policy-making input, so this electronic duo now rules the world. Humans need not apply, just obey, or be blown away. "Logan's Run" depicts a self-sufficient city run by a computer, which Logan, the "hero," causes to crash, thereby destroying the entire basis for the society's survival, as well as the survival of its human inhabitants. An objective observer may conclude that Logan 'progressed' from evolution to extinction via his 'heroic' deed.

When we consider the life-forms with which we are familiar, as individuals & as communities, we can but marvel at the diversity already existing. We see hive societies, such as those of bees, ants, termites & jesus. We see less-organized societies which usually fall prey to hive-societies, even when the individualists are far more numerous than the members of hives. Team-work appears to favor evolution, for teams have consistency & continuity over individual all-stars, who flare & fade like sparks from a campfire.

As I say, when we consider the existing diversity in life-forms & in ways of living, we could occupy our entire lives learning about what already exists, but man's longings & his imagination provide us with additional concepts of life & means of living. Man has imagined other-worldly 'paradises' & earthly Utopias, as well as new types of men. The former USSR proclaimed that it would create the new "Socialist Man," based, apparently, on Weisshaupt's "Bienen-gesellschaft" or "bee society." As Bakunin observed, the Goyim would become the bees & the jesus would be the beekeepers, just as we see ants which keep aphids, which the ants 'milk' for their nourishment. Huxley described, in "Brave New World," a society built to specifications, in regard to its inhabitants, in which each class was bred & fitted into their 'proper' stations in life, so there would be no inconvenient revolutions.

The question which occurs to me is: Who shall decide what Man wants & how he shall get it? We also have the question of Man's definition & his condition as "Man" or Machine in whole or in part. Does Man's/Machine's existence depend on his numbers? Will Man's hospitals become repairshops? What sort of creatures will build & repair this new 'Man'? I'd suppose that the 'New Man' would be built by humans & then by his own kind. I seem to recall your mention of a novel or shortstory on this subject.

With all our worship of mighty machines & super-human computer intelligence, we should accord 'mere Man' some respect, especially when we are aware of his defects & limitations. In Africa, I learned of some hot jobs, such as relaying firebricks in smelter furnaces. I asked my informant how it was possible to replace broken firebricks in an oven hot enough to smelt copper ore. "What sort of machine was used?" I asked. My informant laughed & said, "Machines would melt!" He told me how teams of men wearing tennis shoes & sweat-suits would trot in & out of the furnaces, carrying their replacement bricks. For short periods of time they could do their jobs in intense heat, without melting or catching on fire. They could drink lots of beer without getting drunk & they never became obese! Nor did the White firemen who stoked the steam locomotives on Rhodesia Railways in the Botswana Desert's normal 120° temperatures. I suppose Blacks were too intelligent to do such a job, as they were in Kentucky, where I worked as groundskeeper in temperatures of 100° + & 100% humidity. Whites appear to be the product of cold climates with drastic seasonal weather changes, so perhaps a new man could be bred to adapt to Martian conditions, rather than adapt Mars to Earth conditions for human occupation. The choices are many, indeed, & the contest continues in regard to quantity versus quality. All the best! CRION!
