

LOOK, KID, HOW NATURE IS VARIED, WITH ALL THE MANY TYPES OF PLANTS, FLOWERS AND TREES...

...AND THE MANY TYPES OF INSECTS: THAT FLY, CRAWL AND JUMP. EACH HAS ITS OWN TERRITORY IN THE STRUGGLE FOR LIFE...

...AND ALL THE DIFFERENT TYPES OF BIRDS AND MAMMALS! ALL THIS VARIETY SUSTAINS...

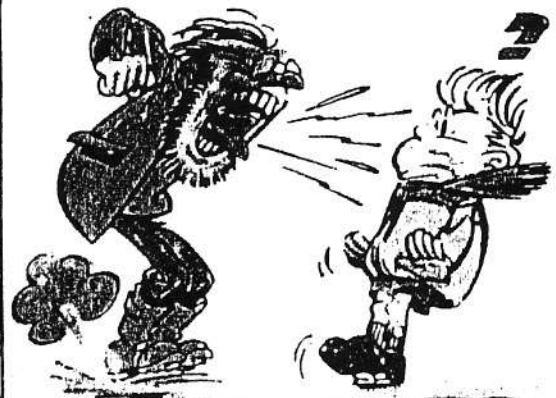

THE BALANCE OF NATURE: EACH CREATURE HAS ITS TYPICAL QUALITIES, ITS SPECIAL ROLE. SO MUST THINGS ALWAYS REMAIN, FOR THAT IS GOOD!

THAT'S CLEAR, PAPA, NOW I UNDERSTAND WHY THERE ARE SO MANY DIFFERENT PEOPLES AND RACES.

THERE ARE NO RACES, RACIST!

22 MAR 08

Hail Sigrin! Many thanks for your thoughtful letter of 18 MAR 08. Ignorance is defined as "lack of knowledge." All ignorant people are cured by knowledge, just as all people are ignorant to some extent. Every day I like to learn something new, in order to cope better the next day. Stupid people cannot use knowledge, so stupid people are not just ignorant. There is no hope, whatsoever, for stupid people, as we learn, sooner or later.

We can learn from our own experience, & we can also learn from others, so as to avoid the hard knocks. I learned survival skills by watching others, who were here before me or who populated areas into which I came. I learned that one who drinks sufficient booze to fall off his chair teaches me that I could do exactly the same. Do I wish to pass out & fall off my chair? If the answer is "No," then I avoid doing what he did. I do not think I am 'special', as stupid people apparently do, so I won't repeat the drunk's experience. The same goes for all life's endeavors: Drive too fast; lose control & crash. How many times do we need to see evidence of this practice, before we learn? I only needed to see it once. A smart person learns fast, but a stupid one can see it over & over again & not make the connections, or he can pretend that "it won't happen to me," but it does. In a gambling casino, where I've worked, one can see that the odds are in favor of the house. That's why the house is in business. Hence, a gambler should not expect to win every time, nor in the next time. The fact that so many gamblers believe the rules of probabilities do not apply to them keeps the casinos in business & the gamblers broke.

Most Goyim (soulless cattle, according to the jews' definition) say: "But who am I to believe? One says one thing & another says another thing." We have the tradition of jury duty in this society, in which the jurors are "the triers of fact." The jury hears all sides to an argument, all or both of which are touted as "the truth," but it is up to the jury members TO USE THEIR MINDS. Usually, they know who is lying by his inconsistencies & contradictions: "Yes, I could see the defendant clearly." (Despite the fact that there was no light at the time in question!) Proper cross-examination on the part of the prosecutor or defense attorney reveals a lie or lies, but not if the jury is stupid. I attended a thoughtcrime trial in Soviet Canuckistan alias Canada alias China-duh in which the jurors could not distinguish between living witnesses & dead ones. All the first witnesses, as I recall, 4, testified that they were jews & they'd all been to Auschwitz, from whence they were transferred to war production plants in Germany, during World War II. The 5<sup>th</sup> witness claimed that they could not have been transferred, "except up the chimney," for that witness allegedly "escaped by going under the wire." To my amazement, the jury believed all 5 witnesses! The <sup>in</sup>ability to perceive facts & reason therefrom is indeed a sign of stupidity. If I claim to believe that it is not raining, then why do I go out with my raincoat & umbrella? Perhaps we can believe that it is going to rain that day, but if that is unlikely, we may wonder about the raincoat-wearer's ability to guide his behavior by his reason. In other words, it is necessary to know the facts, but that is insufficient if we do not put 2 & 2 together, as we see in the case of the American sheeple.

You are wise to distrust those who claim to know all that is worth knowing, & you are wise to take ideologies with a big grain of salt. A good question to keep in mind is the ancient Roman one: "Cui bono?" (Who benefits?) Most ideologies include the principle that we should donate money to those who claim to represent such ideologies. Who benefits? The believers or the 'leaders'? That is our job to decide. Thanks be to ZOG, we now have zoggies posing as 'leaders', such as the ZOG agent-provocateur whom I mentioned.

The wise Chinese have a saying, that "the wrong man with the right plan = Disaster. I've been an eyewitness & survivor of such 'leadership,' so we should not be quick to believe what we want to believe, despite any facts to the contrary. Wishful-thinking can be destructive as well as deadly. Just ask how many Americans have died for "democracy," which has never existed in the USA; so why go elsewhere to die for something we never had here?

I never give up on the young, for they are the future. Just set your compass on the goal of knowledge, & it will come to you. One professor was correct when he told us: "We are all self-educated" (but we must always avoid being 'edjewcated.') We can learn lies with which to fill our minds, but we must use our minds to separate lies from truth, so we may become fully human, instead of sheeple. All the best, & Strength through Joy to you. ORION!
