

3 DEC 08

Fiscal Greetings, Mr. Nevin: Many thanks for your informative book & your letter of 26 NOV 08. I certainly agree with your economic thesis in regard to real wealth, as distinguished from symbolic wealth, i.e. money. I recall that the anarchist, Bakunin, stated that "Small crooks rob banks. Big crooks run them." No private party should be allowed to produce the money for a nation, let alone charge interest for allowing us to print our own money. An economics professor of mine said that "Bankers do not print money & counterfeiters do not charge interest," to which I responded: "Banking sounds like the better racket than does counterfeiting." He quickly changed the subject, which is understandable, since he was a member of The Federal Reserve board.

Any system may be used for good or ill, in regard to the majority. A car may be used to transport groceries, for sightseeing, or as a getaway car in a hold up, depending on who is in the driver's seat. Money has been defined as trust, as you describe, but our money supply is controlled by criminals, on behalf of their power & profit. Wars, for example, are the banksters' harvests. Inflation is theft, deflation is sabotage & usury is slavery. Our money is controlled by the same tribe of Desert Cutthroats alias Habiru Sagaz alias Hebrews as are mentioned in "The Babylonian Woe" by my friend, David Astle. This tribe of traders & usurers held a monopoly on gold, by which they were to use Athens to wage internecine war on their Greek kinfolk, exactly as this same tribe fomented the 2 World Wars of the 20<sup>th</sup> century, which devastated White Europe. Economist Werner Sombart declared that "Wars are the jews' harvests." Their Talmud rejoices in using magic, symbolic wealth, to "have Goyim kill Goyim," & to enslave the survivors with debt. Meyer Amschel Rothschild was correct in saying that the power to issue money is higher than that of law-making, just as a driver with a roadmap is master of the car, rather than the one who made it. Control of real wealth by means of symbolic wealth serves those who wish to retain power over the majority. This Money Mafia stands in the way of peace & prosperity, for they have a vested interest in war & poverty. As J.P. Morgan declared of the poor: "I'll hire 1/2 to shoot the other 1/2."

Britain ceased to be a sovereign state under Cromwell, whose regime withdrew the king's power to issue money, in favor of the jews' Bank of England. The British sovereign was sovereign no longer, & he lost his head into the bargain. The Judeo-British Empire was thus a slave of the usurers whom Cromwell had welcomed from their base in Holland.

I see I've listed two books of the ten you requested. Here are 9 more: The title of Sombart's book is in regard to jews & capitalism, so I recommend:

"The Federal Reserve" by Eustace Mullins	"A Century of War" by Engdahl
"The Money Creators" by Gertrude Coogan	"Sex vs. Civilization" by Elmer Pendell
"The Theory of the Leisure Class" by Thorstein Veblen	
"Hitler's Secret Book" by Adolf Hitler.	"American Manifest Destiny & the Holocausts"
"The Agricola & the Germania" by Tacitus	by Conrad Grieb
"The Decline & Fall of the Roman Empire" by Gibbon	

The Third Reich got out of its kosher Depression by printing its own money, free of interest, as had Lincoln & the 13 colonies before him. Hitler followed Keynes in 'pump-priming' the German economy, by paying for public works, on behalf of increasing real wealth, i.e. essential infrastructure. FDR was jealous that Hitler had pulled Germany out of its Depression by 1935, whereas FDR was a creature of the banksters, who had to borrow every \$1 he spent, & he could never borrow sufficient money to bring full employment to the USA; not until the banksters got the war they wanted. Then there was no lack of money! Another 'harvest' was under way.

An NPR pundit compared Obama's USA to The Roman Empire, whose troops were bleeding to death in Mesopotamia, the area known as Iraq today; whose armies were stretched too thin, & whose economy was in a depressed state. Along came Hadrian, who withdrew from Iraq & its environs. He reinforced existing Roman boundaries with troops he'd withdrawn & used the money saved to pay for public works throughout the Empire. In so doing, he came into conflict with the jews (just as Hitler did). Since Obama is a creature of the banksters, I doubt that he'll accomplish anything similar to Hadrian, nor Hitler. We shall soon see whose side Obama is on, & I doubt it will be our side.

I don't know of any printed issues of the FAEM website, for a few downloads are all I have. I enclose a brief description of the National Socialist economy, from a Third Reich source, along with other writings which pertain to your subject. Politics (people-power) cannot be separated from economics, any more than the head of a man can be separated from his stomach. All the best. ORION! *Eric Thomson* Eric Thomson

2)

P.S.: I see that I've neglected a few pertinent items in my reply to your letter. In a money economy, we know that WHO issues the money is important, as well as WHY they issue it. HOW MUCH is issued is also of great importance. In the 'hard money' period, coin-clipping & debasing the coinage were ways of inflating the money supply. In the era of paper money, counterfeiting was one way of doing it, but banksters need not print counterfeit money to cheat the public. As you noted, most "money" is electronic &/or ledger entries. Fractional reserves allow banks to multiply the money supply on the basis of about \$5 to every paper dollar on deposit, if the reserve requirement is 20% of deposits. As we discussed previously, banksters use symbolic wealth to control real wealth, as were fiction used to manipulate fact. This works as long as the public trusts the 'value' of the symbolic wealth, until an economy goes 'Weimar' with bankster inflation.

When Hitler nationalized the German banking system, The Third Reich owed the banksters no "national debt," nor the interest thereon. German money was printed & paid into existence. So how was inflation avoided? Once the economy was back in operation, the German government gradually withdrew the initial amount of money via the banking system, as Hjalmar Schacht advised. After the war, Schacht told the newly independent Indonesians how to 'pump-prime' their economy. The Indonesians did as Germany had done, but they did not withdraw the initial amount, so they had inflation, & then some!

Money has been defined as "a means of exchange & a store of value." Others have noted that the role of money should be the same as that of standard weights & measures. My persecuted friend, Pedro Varela, said that no one is allowed to speculate on the length of a yard or the volume of a quart, so why should thieves & speculators be allowed to manipulate the purchasing value of a dollar? Imagine if weights & measures were within the purview of The Federal Reserve! I define money as representative of the goods & services in an economy. When the real economy expands, so should the money supply, & vice versa, so we can avoid inflation & deflation.

The Labor Theory of Value has been touted by such as Socialists, Technocrats & Social Creditors. In the USA, the Technocrats wanted to issue "Energy Certificates." In Canada, the Social Credit Party issued "Prosperity Certificates," until the banksters' control of the Canadian government made them stop, thus resuming the banksters' Depression. Technocrats & Social Creditors assumed that "all men are equally productive," or could be, so the issue of money was based on population, rather than production. Machines would do most of the work, so how would people receive the wealth produced without themselves working? The problem for the Technocrats was how to distribute abundance. But, since we live on a finite planet, such abundant productivity cannot be infinite, for it results in the depletion of resources & the pollution of our environment. Since everyone <sup>would</sup> receive the same income, a small proportion of the population was required to work for a short time, perhaps in rotation.

But The Labor Theory of Value tends to ignore Supply & Demand. Thoreau described an Indian who put lots of work into a fine woven basket, but no one wanted to buy it, despite its 'value' in energy or work input. I pointed out that the uncut diamond found on a beach in Australia was as valuable as an uncut diamond wrested at great expense from the bowels of the earth in South Africa. May we determine that a woodcutter should receive more pay than a brain surgeon, because of the energy-input differential? Demand dictates the price.

Another book I recommend is "Communitas--Ways of Life & Means of Living" by Percival & Paul Goodman, both Jewish gentlemen. It describes societies predicated on certain themes: A consumer society which lived in enclosed shopping mall cities; a semi-agrarian society with small towns, & a 'society of maximum freedom' which had few, but essential goods & services, requiring minimal labor on the part of its citizens. The subject left out of these utopian depictions, however, was any mention of money & banking.

Since several of the abovementioned books are available from The Barnes Review, I suggest you market your book through them, or at least have them publicize it to their readers. I also omitted another great book: "The Art of War," by Sun Tzu, if I recall the title correctly. My academic background is in economics, chemistry & international relations, in addition to German, Spanish & English, with a sprinkle of Farsi, Swedish, French & Japanese. My academic career was cut short by the theft of my doctoral dissertation on the USA-USSR role in Peru by U.S. government thugs in the Los Angeles International Airport. I was subsequently deported from the USA & banned from all Soviet Bloc countries the same year: 1969, the year I was kicked out of 4 countries, with one to go. That was Rhodesia, where I worked from 1969 to my deportation in 1976, the year Kissinger told Ian Smith to hand over to Black Rule, no later than 1980.
